

Eta User Processes

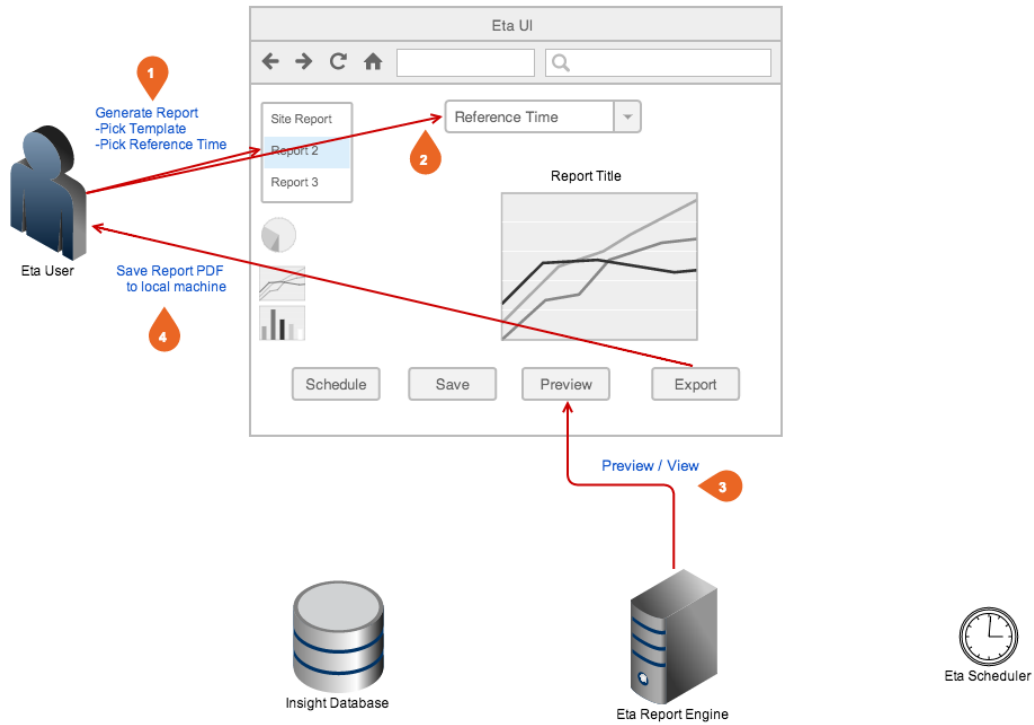

Template Building

In this process, the user creates a site-specific template, starting either from scratch or from a pre-defined Report Blueprint. The same process is used to edit existing templates.

Report Viewing

This process allows the user to view a report in his web browser as a PDF (including reports from past time periods), and save a PDF copy to their local computer.

Automated Report Generation & Editing

This process provides scheduled reports to the user via email, and provides a path for them to quickly return to the editing interface to make any edits they require (including adding one-off comments, etc.).
